Education

Ohio State University — Columbus, OH
Ph.D. in Computer Science and Engineering — August 2019 - Present
Advisor: Prof. Jim Davis — Expected Spring 2025

Wright State University — Dayton, OH
B.S. in Computer Engineering — August 2015 - May 2019

Experience

Ohio State University, Computer Vision Laboratory — Columbus, OH
Graduate Research Associate — August 2019 - Present

Data-Free Knowledge Distillation (on arXiv):

- Developed a novel data-free knowledge distillation approach that is unique in the sense that it does not require a generator network or any other means of synthesizing visually-desirable examples from the teacher model
- Leveraged procedural image programs to generate synthetic data which was combined with heavy data augmentation and adversarial attacks to successfully transfer knowledge from a trained teacher model to a freshly initialized student
- Demonstrated state-of-the-art performance on student models for multiple image classification datasets

Improvements to Batch Normalization (ECCV 2022):

- Observed that the learned affine transformation parameters of batch normalization do not alter much from their initial state and can allow overly large values (output from the preceding normalization) to be passed forward
- Proposed an alternative initialization and updating strategy to the scale parameter of batch normalization, which resulted in statistically significant accuracy gains over the default initialization and other related approaches

Agricultural Crop Stress Recognition (WACV 2021):

- Collaborated with the Department of Food, Agricultural, and Biological Engineering at Ohio State to apply a confidence grounded hierarchical inference approach to plant stress identification

General Electric Research — Niskayuna, NY
Engineering Intern (Mentor: Dr. Paul Ardis) — Summer 2024

- TBD!

Air Force Research Laboratory — Dayton, OH
Graduate Research Intern (Mentor: Dr. Christopher Liberatore) — Summer 2023

- Created a feature augmentation method for addressing long-tail imbalanced classification (work is under U.S. CUI)
- Investigated existing long-tail imbalanced classification approaches applied to DoD-specific data
